Experiment No. 8

Aim: Access and Validate Form Fields Using Events; Design a Gym Admission Form with Live Input Checks

Software / Tools Required:

1. Visual Studio Code
2. Google Chrome
3. HTML5
4. JavaScript (ES6)

8.1 Practical:

Theory:

JavaScript can be used to access HTML form elements and validate the data entered by the user. Events allow the webpage to respond to user actions.

a) Form Fields:

1. Form fields are used to collect information from the user.
2. JavaScript can access their values using DOM methods.

b) Form Validation:

1. Validation checks whether the entered information is correct.
2. It helps prevent empty or invalid form submissions.

c) Events:

1. Events are used to perform actions when the user interacts with form elements.
2. Events such as input, change and submit can be used for live validation.

8.2 Case Study:

A **Gym Admission Form** was designed using HTML, CSS and JavaScript. The form accepts the following information:

1. Name
2. Sex – Male/Female
3. Eye Color
4. Height – Over 6 feet tall
5. Weight – Over 200 pounds
6. Athletic Ability

The form also includes an **"Enter my information"** button to submit the entered information.

Conclusion:

The practical was completed successfully. Form fields were accessed and validated using JavaScript events. A **Gym Admission Form** was designed to collect user information and perform live input checks.
