Experiment No. 5

Aim : Apply Array Methods and Object Handling and Create a Cart Total Calculator with Discount Logic

Software / Tools Required:

1. Visual Studio Code
2. Google Chrome
3. HTML5
4. JavaScript (ES6)

Theory: JavaScript provides arrays and objects to store and manage multiple values efficiently. Array methods are used to perform operations such as adding, removing, searching and processing elements.

a) Array Methods

1. Arrays are used to store multiple values in a single variable.
2. Common array methods include push(), pop(), map(), filter(), reduce() and sort().

b) Objects

1. Objects store data in the form of key-value pairs.
2. Objects can be used to represent real-world entities such as products.

c) Array of Objects

1. An array of objects stores multiple objects in a single array.
2. It is useful for storing product details such as product name and price.

d) Discount Logic

1. Discount is calculated based on the total cart amount.
2. The final amount is obtained after subtracting the discount from the total amount.

Case Study Implemented: A simple program was created using an array of objects to store numbers and find the maximum and minimum values using JavaScript array methods.

Conclusion: The practical was completed successfully. Array methods and object handling were implemented using JavaScript. An array of objects was used to find the maximum and minimum values, and the concepts were applied to create a cart total calculator with discount logic.
